C++ Roast Generator Program Explained

Upgrade to Google AI Plus

P

generate a console based program in C++ beginner friendly ,
for generating roasts the program will take users name and
will give a roast line for that name .
every time there will be new roast .
create atleast 8 -10 roast templates for the same .

Building a roast generator is a classic way to practice string handling and random number generation in C++. To make sure you get a different roast every time, we use the `rand()` function seeded with the current time.

Here is a beginner-friendly version using an array of strings to store the templates.

Output->

```
excusegenerator.cpp X
github> g++ excusegenerator.cpp > ./main()
13 // A list of 10 solid (or ridiculous) excuses
14 vector<string> excuses = {
15     "my cat decided my laptop keyboard was a litter box.",
16     "I accidentally uploaded my grocery list instead of the PDF.",
17     "my Wi-Fi was hijacked by a rogue squirrel colony.",
18     "I entered a flow state so deep I forgot the concept of deadlines.",
19     "my 'Save' button decided to go on strike today.",
20     "the local power grid succumbed to a very minor breeze.",
21     "I spent the night fighting a sentient printer that refused to cooperate.",
22     "my younger sibling used my notes to make origami cranes.",
23     "I fell into a Wikipedia rabbit hole about the history of salt.",
24     "the cosmic radiation levels were simply too high for my CPU."
25 };
26
27 string name;
28 cout << "--- The Ultimate Assignment Excuse Generator ---" << endl;
29
30 while (true) {
31     cout << "\nEnter your name (or type 'exit' to quit): ";
32
33     string name;
34     getline(cin, name);
35
36     if (name == "exit") {
37         return 0;
38     }
39
40     int index = rand() % excuses.size();
41     cout << "Professors, " << name << " couldn't finish the work because " << excuses[index] << endl;
42
43     cout << "\nEnter your name (or type 'exit' to quit): ";
44     string name;
45     getline(cin, name);
46 }
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

--- The Ultimate Assignment Excuse Generator ---

Enter your name (or type 'exit' to quit): priya

Professors, priya couldn't finish the work because my younger sibling used my notes to make origami cranes.

Enter your name (or type 'exit' to quit):

Realistic excuse generation /debugging ->

C++ Excuse Generator For Assignments Upgrade to Google AI Plus

generate realistic excuses ,not vague responses

◆ To make the excuses feel more "realistic," we should focus on common technical failures, personal emergencies, and household mishaps that actually sound plausible to a professor or teacher.

Here is the updated C++ code with more grounded, professional-sounding excuses.

```
C++
#include <iostream>
#include <string>
#include <vector>
```

Correct output->

```
Enter student name (or type 'exit' to quit): priya
[OFFICIAL NOTIFICATION]:
Unfortunately, priya suffered a major hardware failure on their primary laptop earlier this morning.
A request for a short extension is being prepared.
```

Improving the code->

Gemini C++ Excuse Generator For Assignments Upgrade to Google AI Plus

print "Excuse generator " instead of "personalised excuse generator "

◆ Got it. I've updated the header to the simpler title and kept the logic tight and clean for you.

Here is the revised C++ code:

```
C++
#include <iostream>
#include <string>
#include <vector>
#include <ctime>
#include <cstdlib>

using namespace std;
```
