

AI ROAST GENERATOR

#Bug in code -not showing apostrophe “ “ “

The screenshot shows a C++ program named `roastgenerator.cpp` in Visual Studio. The program defines a vector of roast templates. The output in the terminal shows a roast for 'Ishika' where apostrophes are escaped as `'` instead of `'`. The code is as follows:

```
15 // Witty, punchy roast templates
16
17 vector<string> roasts = {
18     "I'd agree with you, %s, but then we'd both be wrong.",
19     "You're not the shortest person I know, %s, but you're definitely the biggest 'bri f' sum",
20     "I'm jealous of all the people who haven't met you yet, %s.",
21     "You possess a mind like a steel trap, %s--always closed and slightly rusty.",
22     "If I gave you a penny for your thoughts, %s, I'd get change back.",
23     "You're the reason they have to put instructions on shampoo bottles, %s.",
24     "I love what you've done with your hair, %s. How do you get it to come out of your nostril",
25     "You have a great 'roasting' face, %s. It looks like it's roasting from a long day of roasting",
26     (const char [77])"You're like a software update, %s. Whenever I see you, I think: 'Not now.'",
27     "You're like a software update, %s. Whenever I see you, I think: 'Not now.'",
28     "It's impressive, %s. You have the charisma of a damp paper towel.",
29     "You're the human equivalent of a '404 Error: Not Found,' %s."
30 };
31
32 int randomIndex = rand() % roasts.size();
33 string selectedRoast = roasts[randomIndex];
```

The terminal output shows the program running and displaying a roast for 'Ishika':

```
PS C:\Users\palla\Desktop\New folder\c programming classes\C.C++\selfstudy\githubass> g++ roastgenerator.cpp -o roastgenerator ; if ($?) { g++ roastgenerator.cpp -o roastgenerator } ; if ($?) { .\roastgenerator }
Enter a name (if they can handle the truth): Ishika

> I'd agree with you, Ishika, but then we'd both be wrong.
```

Correct output->

The screenshot shows the same C++ program in Visual Studio, but with the correct output. The code is as follows:

```
1 #include <iostream>
2 #include <string>
3 #include <vector>
4 #include <ctime>
5 #include <cstdlib>
6
7 using namespace std;
8
9 int main() {
10     // Seed the random number generator
11     srand(static_cast<unsigned int>(time(0)));
12
13     string name;
14     // Updated prompt text
15     cout << "Enter Name (at your own risk): ";
16     getline(cin, name);
17
18     // Witty roast templates using standard ASCII to avoid encoding issues
19     vector<string> roasts = {
20         "I'd agree with you, %s, but then we'd both be wrong.",
21         "You're not the shortest person I know, %s, but you're definitely the biggest 'bri f' sum",
22         "I'm jealous of all the people who haven't met you yet, %s.",
23         "You possess a mind like a steel trap, %s--always closed and slightly rusty.",
24         "If I gave you a penny for your thoughts, %s, I'd get change back.",
25         "You're the reason they have to put instructions on shampoo bottles, %s.",
26         "I love what you've done with your hair, %s. How do you get it to come out of your nostril",
27         "You have a great 'roasting' face, %s. It looks like it's roasting from a long day of roasting",
28         "You're like a software update, %s. Whenever I see you, I think: 'Not now.'",
29         "You're like a software update, %s. Whenever I see you, I think: 'Not now.'",
30         "It's impressive, %s. You have the charisma of a damp paper towel.",
31         "You're the human equivalent of a '404 Error: Not Found,' %s."
32     };
33
34     int randomIndex = rand() % roasts.size();
35     string selectedRoast = roasts[randomIndex];
36
37     cout << selectedRoast << endl;
38 }
```

The terminal output shows the program running and displaying a roast for 'RIYA':

```
PS C:\Users\palla\Desktop\New folder\c programming classes\C.C++\selfstudy\githubass> g++ roastgenerator.cpp -o roastgenerator ; if ($?) { g++ roastgenerator.cpp -o roastgenerator } ; if ($?) { .\roastgenerator }
Enter Name (at your own risk): RIYA

I'd love to insult you, RIYA, but I'm afraid I wouldn't do as good a job as nature already did.
```
